Appendix: Tulip GTM Context and Data Dictionary

Read this before you open the dataset. These are the working assumptions to use where the data is silent. Where the data disagrees with these assumptions, your job is to notice and say so.

About Tulip

Tulip is a frontline operations platform, a low-code application platform used by manufacturers and life sciences companies to digitize shop floor work. Customers build apps for guided work instructions, quality, MES-adjacent workflows, traceability and machine integration. Tulip sells primarily into General Manufacturing, Pharma, Medical Device, and Aerospace and Defense. The company sells direct in established geographies and through channel and SI partners elsewhere.

Sales motion

Tulip is a land and expand business. Customers typically land with a smaller initial deployment in one team or one site, then expand into adjacent teams, more sites or use case categories over multiple years. Expansion deals are often substantially larger than the initial land. Renewals happen annually for most contracts, with some multi-year enterprise and partner-led agreements.

Fiscal calendar

Tulip fiscal year runs February 1 through January 31 and is named for the January it ends in. The year that began February 1, 2026 ends January 31, 2027 and is called FY27. The current fiscal year is FY27.

Quarters: Q1 February to April, Q2 May to July, Q3 August to October, Q4 November to January. So FY27 Q1 is February 1 to April 30, 2026. The Created FYQ, Close FYQ, Fiscal Period and Close FY columns use this calendar.

Segmentation: read this carefully

Tulip has historically described its customer base in three size tiers, with the following planning assumptions.

Tier	Headcount	Sales cycle	Assumed win rate	Typical first / expansion deal
SME	under 500	3 to 4 months	10%	$12K / $20K
MM	500 to 5,000	3 to 4 months	35%	$20K / $40K
ENT	over 5,000	6 to 9 months	15%	$20K / $100K

These are planning assumptions and they are not measurements. Two things about how they appear in the export are worth knowing before you start.

- The Company Size (Employees) column does not contain headcount. It contains a size label, and it uses four values: SMB, SME, MM, ENT. The table above defines three tiers. Reconciling that, or deciding it cannot be reconciled and saying so, is on you.

- The FY26 Segment column is not a size segment. It holds Tulip vertical grouping (General Manufacturing, Pharma, Med Dev, Adef), which is a rollup of the Industry column. If you need a size cut, Company Size (Employees) is the only field that offers one.

Key terms

Term	Definition
Sold Licenses	Tulip user seats the customer contractually purchased. Per seat pricing varies by segment and contract structure.
Utilization - 1 Month Ago	Share of sold licenses actively used in the last month, expressed as a decimal (0.85 = 85%). Above 1.0 means more users are logging in than were purchased, which is often an expansion signal. Below 0.33 is the internal retention risk threshold.
Health	CSM-assigned rolling indicator: Critical, At-Risk, Healthy. Updated quarterly. Known to lag and to be maintained inconsistently across CSMs. Note that it is populated on new-business records as well as renewals, where its meaning is not the same.
CSM Health Note	Free-text note from the account CSM. Length and quality vary by CSM, and the tone does not always track the Health flag on the same row, in both directions. Like Health, it is populated on every record type, including new-business deals that have no CSM and no renewal. Read those with care.
Latest Gong Call Highlight	Paraphrased moment from the most recent customer call. Not verbatim and not a complete picture of the call. Also populated across all record types.
Stage	Renewals lifecycle: 1 At Risk, 2 Open Renewal, 3 Committed to renew, 4 Renewed / Won, Churned. New-business lifecycle: 1 Discovery, 2 Evaluation, 3 Proposal, 4 Decision, 5 Procurement, Closed Won, Closed Lost. A few administrative stages also appear (GTM Ops Review, 0 With Finance, Rejected, Ordered / Won).
Forecast Category	AE-assigned commit level: Pipeline (early), Best Case, Most Likely, Commit, Closed, Omitted (parked).
Won / Lost	Final outcome: Won, Lost, Open. Applies across both lifecycles, so a renewal that renewed and a new deal that closed won both read Won.

Money fields

Field	Definition
New Committed ARR	ARR newly added by this deal, excluding any renewing amount. Used for new-business and expansion analysis. Populated on roughly 1,030 of 1,458 rows.
Renewal ARR	ARR being renewed by this deal. Mostly confined to renewal records but not entirely. A number of new-business rows carry a value here too, usually but not always zero. Decide what that means before you use the field.
Total Booking	Total contract value of the deal, which may span multiple years. Often the largest of the three.

Field	Definition
Weighted	Probability-weighted New Committed ARR, an AE-assigned forecast value.
Amount of Professional Services	Services attached to the deal. Usually zero.

These fields are not always internally consistent. On a pure renewal, Renewal ARR and Total Booking should agree. They frequently do not.

Partner attribution

Field	Definition
Generated by	Source of the opportunity: Tulip (direct) or Partner (channel-led).
Partner of Record	The lead partner on a partner-led deal. Blank on direct deals, in principle. It disagrees with Generated by more often than it should, in both directions.
Reporting Source	Origination channel: Marketing, Sales, BDR Outbound, Referral, Eco, and others.

Other fields you will see

Opportunity Owner, Opportunity Name (free text, reps do not always follow the naming convention), Account Name, New Logo vs. Existing, Created Date, Created Quarter, Close Date, Age and Opp Age Recal (two age columns from a methodology change, they sometimes disagree), Opportunity Record Type, Deal Type, Industry, Geo, Region, Primary Use Case, Probability (%), Fiscal Period, Loss Reason, At Risk/Churn/Downsell Reason, Created FYQ, Close FYQ, Deal Size Categorization, Deal Size Bucket, Expansion Deal Bucket, Close FY, CSM Health Note, Latest Gong Call Highlight.

Final note: this is an anonymized export of real CRM data. Field definitions are nominally correct but hygiene varies, and the anonymization itself was imperfect in places. Where columns disagree with each other or with this document, that is your signal to investigate.
